EXPERIENCE

AirAsia MOVE

Bengaluru, India(Remote)

Software Engineer I - Full Stack

September 2023 – Present

- Developing Hotel Management System(HMS) Dashboard using tools and technologies such as **HTML, CSS, jQuery, C#, .NET Core, GO, PostGreSQL, Google Cloud Platform(GCP), Kubernetes, Redis, Visual Studio**.
- Migrated **Monolithic C#** APIs to Go-based **Microservices**, including Search, Prebook, Book and Cancel Booking APIs, improving scalability and performance:
 - Search API: Implemented Rate Channel Discount logic for available rooms ensuring atleast **80%** unit test coverage for new codes. The new microservice demonstrated a P99 latency of **1.5s** compared to **2.7s** in the old architecture during a **50 RPS** load test.
 - Prebook API: Replicated request and response models, implemented business logic related to prices, tax, discount, promotion, cancellation policy calculations.
 - Book API: Led end-to-end development (**90%** solo contribution) including request validation, custom error codes, Channel Manager integration and email notifications for low inventory and successful booking.
 - Cancel API: Developed the entire API from scratch, including features such as calculating cancellation fees, restoring inventory, and sending cancellation notifications via email to hoteliers and channel managers.
- Integrated **Prometheus** Metrics and created **Grafana** Dashboards with graphs such as Requests per sec(RPS), Average, P99, P95 Latencies, Requests Count(Success and Fail) for all the APIs to facilitate easy monitoring of downtime, spikes and errors.
- Built a shared GitLab repository with reusable modules (entities, data fetchers, filters, pricing workers), integrated as submodules across all the three services, reducing code redundancy by **40%** and accelerating development.
- Migrated data and enhanced the dashboard to read and write from **MongoDB** instead of Postgres as part of a content unification exercise, realizing a cost saving of **20K Malaysian Ringgit(MYR)** per month and reducing total costs by **59.42** percent.

MAQ Software

Hyderabad, India

Associate Software Engineer (Internship) — Experience Letter

May 2022 – July 2022

- Explored **Microsoft Teams API** to fetch and analyze Microsoft Events related channel data, facilitating business decisions based on attendee engagement and interactions.
- Developed a **C#** solution to store data in a **SQL** database, enabling detailed reporting and insights through **Power BI**.

Coding Ninjas

New Delhi, India

Teaching Assistant — Experience Letter

September 2021 – January 2022

- Demonstrated excellent **problem solving** and **debugging skills** by resolving over **500** student doubts in **C++** with an average rating of **4.85 / 5**.

EDUCATION

INDIAN INSTITUTE OF TECHNOLOGY BHILAI

Bhilai, India

Bachelor's in Computer Science (CGPA - 8.9 / 10)

July 2019 – May 2023

PROJECTS

Codeial | Project Link - github.com/kinshuk-644/codeial

September 2021

- A basic social media web application built in **JavaScript, Node.js, CSS, SCSS, EJS** and **MongoDB**.
- Create/Delete, Like/Dislike posts and comments.
- Add/Remove friends. Chat with all users on a channel.

TECHNICAL SKILLS

Programming Languages:

Proficient: C/C++, Data Structures, Algorithm Design, Object-Oriented Design
Experienced: HTML, CSS, JavaScript, Golang, C#, SQL, MongoDB, Redis
Familiar: Python, Java

Frameworks and Libraries: Node.js, Express.js, .NET Core, JQuery, React.js, Typescript, Django

Developer Tools: Grafana, Git, Docker, Postman, Power BI, Figma, Visual Studio Code, Visual Studio

CODING PROFILES

Leetcode:

Top 7% on Leetcode(700+ problems solved). Highest Contest Rating - **1826** Profile - <https://leetcode.com/u/kinshuktaya644/>

Codechef:

Ranked 7 in Codechef Starters 61 Division 3. Codechef Rating - **1619** Profile - <https://codechef.com/users/kinshuk644/>
